

ASTM C309 CURING COMPOUNDS WisDOT Tested and Approved Batches

Page 1 - Wax-based white-pigmented
Page 2 - Poly-alpha-methylstyrene (PAMS)-based

Concrete Curing Compound acceptance is based on actual test results in MTS (140- Concrete Curing Compound). The following lists are generated from MTS for viewing purposes only.

Winter carry over - all curing materials carried over the winter must be re-tested before use. Testing samples must be collected directly from the contractor's carryover supply prior to use. Approved carryover batches will be listed as contractor specific with the contractor name included in the material description in MTS and on this list. Batches listed with a contractor are only valid for product carried over by that contractor.

Linseed oil-based curing compounds are not allowed.

Curing Compound Sampling

Provide one-quart sample in a clean, sealed, leak-proof container (see example below). Follow ASTM 009 section 12.1 for packaging instructions. Also, submit the following information with the curing compound sample:

1. Certified Test Report from the manufacturer that includes the following:
 - Name of Manufacturer
 - Type/Class of compound (PAMS or WAX)
 - Batch #
 - VOC (Volatile Organic Compound) amount
 - Total Solids Percentage (Non-volatiles)
 - Drying Time
2. Date sampled
3. Sampled by
4. Safety data sheets

Ship Sample To:

Wisconsin Department of Transportation
