Trying to setup TraCS notification service using web based e-mail but unsure how to configure the SMTP server settings in TraCS.

For Gmail, configure the SMTP settings in TraCS using the following:

Server address: smtp.gmail.com

User name: Your full Gmail address (e.g. example@gmail.com)

Password: Your Gmail password

Port: 465

For Yahoo!, configure the SMTP settings in TraCS using the following:

Server address: smtp.mail.yahoo.com

User name: Your full Yahoo email address (e.g. example@yahoo.com)

Password: Your Yahoo! Mail password

Port: 465
