

Net Motion

Last Modified on 08/17/2017 11:35 am CDT

Net Motion seems to be causing Issues.

When turning on NetMotion opening forms seems to be very slow, but turning it off works fine.

“I figured it out! After reviewing the network connectivity via Wireshark, I saw that TraCS was trying to check the default printer. This happened to be a network printer (as the deputy selected it as their default).

The communication from TraCS to the network printer was slow and was causing the freezing, when I set the default printer back to the local squad printer, everything loaded quickly!” Jesse Burns, Chippewa CO
