

User Attributes in AD

Last Modified on 08/01/2017 3:57 pm CDT

In Active Directory (AD), do not know which data type to use for user attributes.

Here are the data types for the custom user attributes in Active Directory for [task 3-16](#).

Resolution:

Use **Case Insensitive String**.

Explanation:

TraCS just uses a simple LDAP query to pull attributes from Active Directory, so it's not too particular on formatting.
