2022

**Wetland Program Mitigation Tracking
Report**

for the

Mitigation Bank Review Team

March 22, 2023

Prepared by  **Stantec**

Table of Contents

Background.....	1
Status of WisDOT Bank System.....	1
Summary of 2022 Wetland Mitigation Tracking Activities.....	2

Appendices

Appendix A – Wetland Loss and Credits

- Figure 1. / Table 1. 2022 WisDOT Wetland Loss by Wetland Bank Region*
- Figure 2. / Table 2. 2022 WisDOT Wetland Loss by Wetland Type*
- Figure 3. / Table 3. 2022 WisDOT Wetland Compensation by Wetland Type*
- Figure 4. Annual WisDOT Wetland Mitigation Bank Credit Use at Airports*

Appendix B – Bank History

- WisDOT Wetland Bank System Overview*
- Total WisDOT Wetland Acres Loss per Year from 1990 through 2022*
- WisDOT Cumulative Wetland Compensation and Losses from 1990 through 2022*
- Ratio of WisDOT Acres Compensated to Acres Impacted from 1990 through 2022*
- WisDOT Wetland Credit Bank System Utilization Rate (Credits per Year) by Wetland Bank Region (2008-2022)*
- WisDOT Wetland Credit Bank System Utilization Rate (Credits per Year) by Office Region (2008-2022)*

Appendix C - Bank System and Bank Region Maps

- Wetland Mitigation Banking Technical Guidelines Interim Guidance*
- WisDOT Wetland Credit Ledger Coordinators*
- WisDOT Wetland Site Long-term Protection Management Plan*
- WisDOT Wetland Mitigation Bank Accounting System Status of Open Sites*
- 2022 WisDOT Wetland Bank Regions Credit Status Figures*
 - Northern Fox / Lake Michigan Bank Region*
 - Northern Lake Superior Bank Region*
 - Northern Mississippi Bank Region*
 - Southern Fox / Lake Michigan Bank Region*
 - Southern Mississippi Bank Region*
- WisDOT's Original and Future Bank Service Areas*

Appendix D – Site Specific Mitigation Bank Ledgers

Northern Fox / Lake Michigan Bank Region

- o *Bina, Oneida, Peshtigo Brook Phase 1, Peshtigo Brook Phase 2, Peshtigo Brook Phase 3, STH 20, and STH 50/Fox River*

Northern Lake Superior Bank Region

- o *Beartrap Creek, Kimmes-Tobin, and Roy Johnson West*

Northern Mississippi Bank Region

- o *Beaver Brook, Big Eau Pleine, Branca, Clark County Health Care, Eitenmiller, Lauritsen, Staples Creek, Stephens, Strom-Nelson, Three Lakes Phase I, and Three Lakes Phase II*

Southern Fox / Lake Michigan Bank Region

- o *Hope Marsh Phase I, Hope Marsh Phase II, and Taycheedah Creek*

Southern Mississippi Bank Region

- o *Bell Center, Cull, Jacobson, Kmetz, Knights Creek, Lake Geneva, London, Lost Creek, Mill Bluff - Keichinger & Mecozzi, Mill Creek, Moses Creek, Neptune, Patrick Marsh - Vail Credit, Pechacek-Gilbertson, Rockbridge/Ripley, Rosenow Creek, Schellinger, Waupun, Whitewater Bypass, Wildcat Mountain, and World Dairy Center*

Appendix E – Statewide Ledger

2022 WisDOT MBRT Wetland Compensation Ledger

2022 WisDOT MBRT Wetland Compensation Ledger Modifications

Appendix F – Wetland Credits by Type Status

Figure 1 / Table 1 2022 Available Wetland Mitigation Credits by Wetland Type

BACKGROUND

Stantec Consulting Services Inc. (Stantec) was contracted by the Wisconsin Department of Transportation (WisDOT) Wetland Program to prepare the 2022 Wetland Program Mitigation Tracking Report for the Mitigation Bank Review Team (MBRT). The report is a summary of compensatory wetland mitigation tracking activities and credit use ledgers. Data used to compile the report was provided to Stantec by environmental coordinators from WisDOT region offices. It is the responsibility of region offices to keep accurate ledger records. The report is prepared in accordance with the WisDOT Wetland Mitigation Banking Technical Guidelines and Banking Agreement (Second Revision: March 2002) (Technical Guidelines).

The summary and ledger provide details about the mitigation of wetland loss from WisDOT projects reported during 2022. Projects are tracked by let date of transportation construction contracts. Let dates generally correspond to the year in which a project is anticipated to be constructed. Let schedules and construction dates occasionally change resulting in adjustments to annual reporting. Consequently, the 2022 report contains data for projects with let dates ranging from 2021 through 2022. A let date prior to 2022 indicates a schedule change or an earlier reporting error.

In 2017 the U.S. Army Corps of Engineers (USACE), in conjunction with the WisDOT, initiated a Quality Assessment Review (QAR) of all mitigation bank sites. The QAR is an effort to rectify the USACE and WisDOT records to ensure that credit releases and debits have been accurately recorded by the USACE in preparation for loading the data into their Regulatory In-lieu Fee and Bank Information Tracking System (RIBITS). The QAR process has been completed for some sites, which received a QAR letter from the USACE confirming the total credit release and, in some cases, the current available credits by type for the site.

The ongoing QAR process may result in additional changes to site ledgers. This report reflects any necessary credit adjustments as of 12/31/2022.

STATUS OF WISDOT BANK SYSTEM

The WisDOT compensatory wetland mitigation bank system was established as a statewide umbrella bank in 1993. Since then, approximately 7,748 credits have been developed across approximately 266 sites (85 bank sites and 181 project specific sites). Statewide there are 45 open bank sites with a total of 1,338 available credits. Seven of those sites have a combined 503 additional credits pending release.

WisDOT projects have resulted in approximately 4,828 acres of wetland losses, which have been compensated for with approximately 6,410 acres of wetland credits, leaving 1,338 credits available. The statewide ratio of wetland loss acres to wetland compensation acres over the history of the bank system is 1:1.33.

The average annual credit utilization over the 30 year life of the bank system is 214 credits per year. The average utilization over the past 10 years is much lower at 96 credits per year. Based on those averages the system has enough credits on hand for 8 to 19 years. Developing a new bank site can take years, so WisDOT is currently in the process of identifying potential sites to be used for future mitigation banks.

SUMMARY OF 2022 WETLAND MITIGATION TRACKING ACTIVITIES

Summary tables and figures found in the appendices are grouped by WisDOT wetland bank regions. The administrative boundaries of the five regions were defined in the Technical Guidelines and are based on three major geographic drainage basins subdivided into smaller watersheds and further divided by a floristic province boundary. The bank regions are identified as: Northern Fox/Lake Michigan, Northern Lake Superior, Northern Mississippi, Southern Fox/Lake Michigan, and Southern Mississippi.

Appendix A contains three figures with corresponding tables summarizing statewide wetland loss and compensation for 2022. A fourth figure and associated map summarize the annual mitigation bank credit use by Bureau of Aeronautics (BOA) projects.

In 2022 WisDOT administered 135 Construction Let Projects for Road, Bridge and Airport infrastructure development or maintenance which resulted in the need for wetland mitigation. There were 370 individual wetland credit type transactions, with a total of 51.51 acres of wetland loss and compensatory mitigation of 49.91 wetland acre credits.

Figure 1 and Table 1 present a breakdown of the wetland loss by wetland bank region. The largest amount of wetland debits (22.86 acres) occurred from Southern Mississippi mitigation banks.

Figure 2 and Table 2 summarize the wetland impact data by wetland type. Wet Meadow (M) was the most impacted wetland type (20.75 acres), and the least impacted wetland type (0.03 acres) was Deep Marsh.

Figure 3 and Table 3 summarize the wetland compensation data by wetland type. The majority of compensation credits utilized in 2022 were Wet Meadow (M) wetland credits with 25.03 acres, which accounted for 50% of all compensation.

The statewide debit ratio for 2022 was 1:0.97 (acre lost : acre credits). Typically the statewide debit ratio is at least 1:1, but in 2022 the BOA reported 16.39 acres of impact, 7.90 acres of which were compensated at a 1:0.5 ratio. If the BOA debits were excluded from the analysis, the overall compensation ratio would have been 1:1.06.

The average statewide debit ratio for the life of the bank system is approximately 1:1.33 (acre lost : acre credits). Debit ratios will vary some as defined procedurally in the Technical Guidelines, in the section titled Operational Criteria for the Bank and in Appendix C.

Appendix B contains historical information about the development of the WisDOT Wetland Mitigation Banking System. As highlighted in the *WisDOT Wetland Bank System Overview* figure, the initial pilot site for the bank system was established for District 1 at Patrick Marsh in 1989. In 1993 the first statewide umbrella mitigation bank instrument (UMBI) agreement was established, with revisions occurring first in 1997 and again in 2002. In 2013 WisDOT began adopting single site mitigation bank instruments (MBI) as directed by the 2013 U.S. Army Corps of Engineers for new mitigation bank sites, 5 of which have been established to-date.

The *WisDOT Wetland Bank System Overview* figure also highlights some statistics for the bank system, such as the total number of credits generated, the average annual wetland loss, credit usage, and associated compensation ratio, and the average number of projects requiring mitigation each year.

Appendix B also contains three graphs which provide year-by-year annual loss, usage, and compensation ratio statistics.

The two tables, *WisDOT Wetland Credit Bank System Utilization Rate (Credits per Year) by Wetland Bank Region* and *WisDOT Wetland Credit Bank System Utilization Rate (Credits per Year) by Office Region*, summarize annual wetland loss, compensation, and credit utilization ratios for the past 15 years.

Appendix C contains a series of maps with information on the status of the bank system. The figure *Wetland Mitigation Banking Technical Guideline Interim Guidance* was adapted from Figure C1 and Table 3C in the *WisDOT Wetland Mitigation Banking Technical Guidelines and Banking Agreement (Second Revision: March 2002)* and illustrates the original administrative boundaries, along with the updated boundary based on the Great Lakes Watershed Divide. The figure also includes guidance on the mitigation process and the table breaks down the compensation ratio increments to be used under various circumstances.

The *WisDOT Wetland Site Long-term Protection Management Plan* figure illustrates the location, type (bank, consolidation, or project specific), status (open, closed, or new development), and ownership of all WisDOT wetland mitigation sites throughout Wisconsin. WisDOT is continually reviewing mitigation bank sites, as well as project specific mitigation sites, to track any changes in status and ownership, and to ensure they are maintained in way that meets the agreed upon performance standards.

Appendix C also contains statewide and regional maps which depict bank site locations and credit status information. Pie charts depict the number of available credits, used credits, and pending credits for all open sites within the specified area of interest. The regional maps also include credit status information for individual open sites within the specified region.

WisDOT has also begun to adopt the WDNR's bank service areas (BSAs) in place of the administrative Bank Regions from the Technical Guidelines for new sites. The figure titled *WisDOT's Original and Future Bank Service Areas* displays a side-by-side comparison of the original Bank Regions with the WDNR's BSAs.

Appendix D includes the site-specific mitigation bank ledgers. The bank ledgers include a summary sheet with background information, such as construction year, location, property acreage, and BSA. The summary sheets also include information on the starting wetland credits and the currently available wetland credits. The ledger for each site includes any transactions included in this report. In some cases, a place holder was created for sites where data verification is still pending. MBRT members will be provided completed summaries as they become available.

Appendix E is the statewide ledger which details all wetland losses and associated compensation transactions for WisDOT projects in 2022 as provided to Stantec by WisDOT Regional Environmental Coordinators. Any adjustments to ledgers from previous reports are included in the ledger modifications table.

Appendix F includes a table and a figure which summarize the current credit availability by wetland type. The table summarizes the credit availability for each site¹. It is organized by Wetland Bank Region and also includes statewide totals. The figure illustrates the percentage of wetland credits available for each wetland type when compared with the total available acreage.

¹ Detailed credit information is not available for all sites. In those instances, the WisDOT Regional Environmental Coordinator provided the total available acreage based on historical records and reports.

WisDOT Wetland Mitigation Bank Credit Use at Airports

Appendix B – Bank History

WisDOT Wetland Bank System Overview

Total WisDOT Wetland Acres Loss per Year from 1990 through 2022

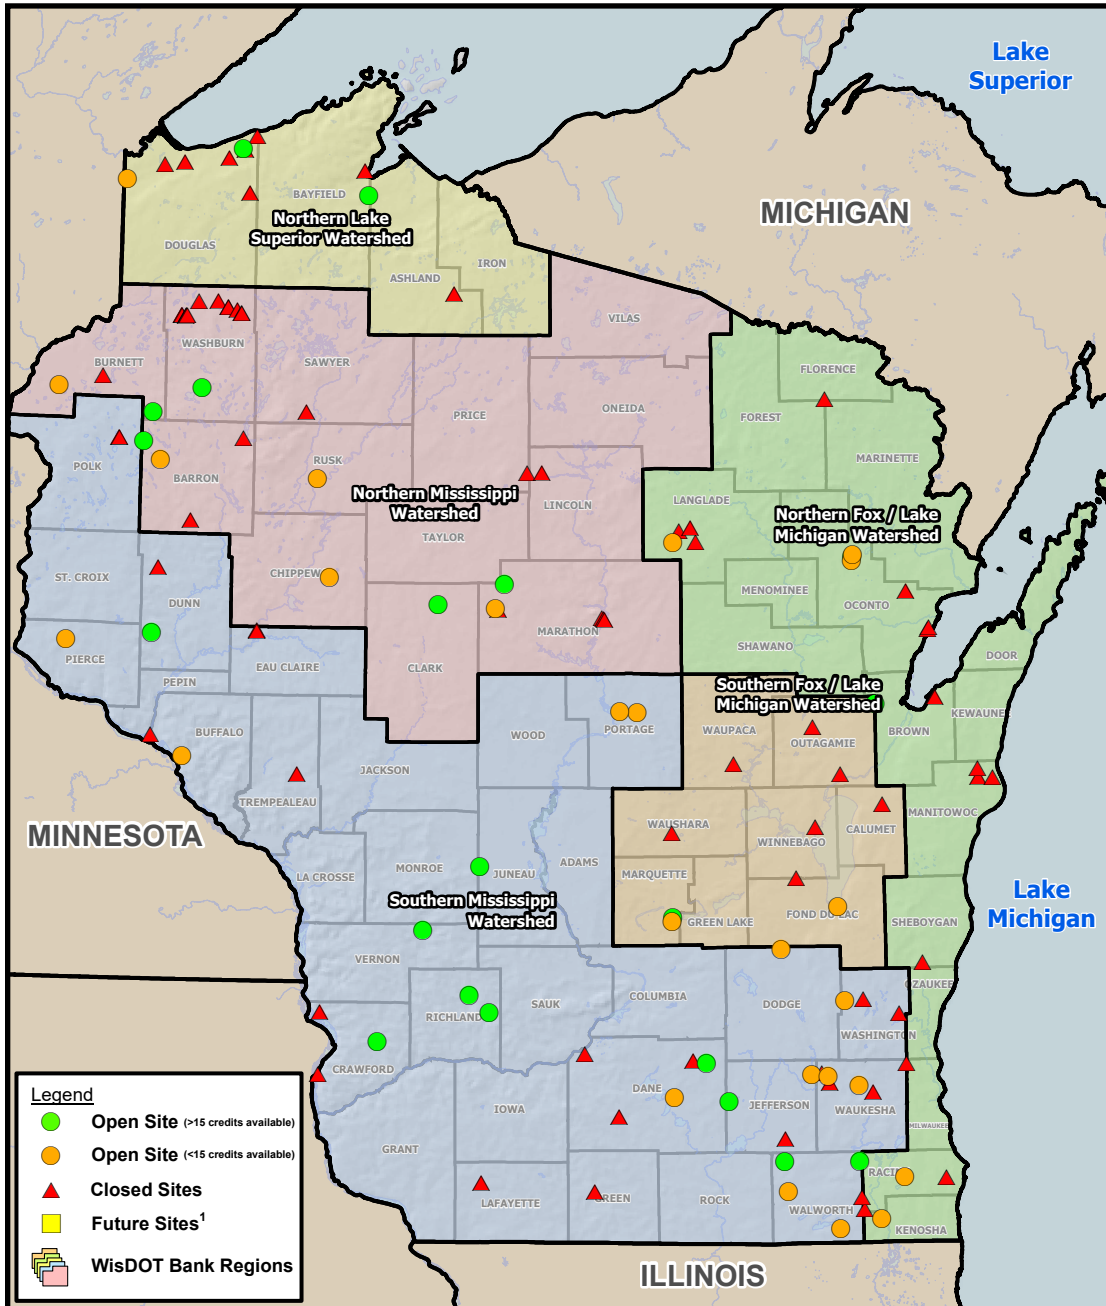

WisDOT Cumulative Wetland Compensation and Losses from 1990 through 2022

Ratio of WisDOT Acres Compensated to Acres Impacted from 1990 through 2022

*WisDOT Wetland Credit Bank System Utilization Rate (Credits per Year) by
Wetland Bank Region (2008-2022)*

*WisDOT Wetland Credit Bank System Utilization Rate (Credits per Year) by
Office Region (2008-2022)*

WisDOT Wetland Bank System Overview

Stats for 30 Yr Old System

- 7,748 compensation acre credits developed
- 6,410 compensation acre credits used
- 4,828 wetland loss acres
- Average compensation ratio = 1.33
- About 275 credit transactions per year (8,345 total)
- About 114 let projects per year require mitigation
- About 161 acres/yr of wetland loss (max 454)

Site and Bank Credit Status

- 45 open sites
- 40 closed sites
- 0 developing sites¹
- 62% credits used (3,010 acres)²
- 28% credits available (1,338 acres)²
- 10% pending credits (503 acres)

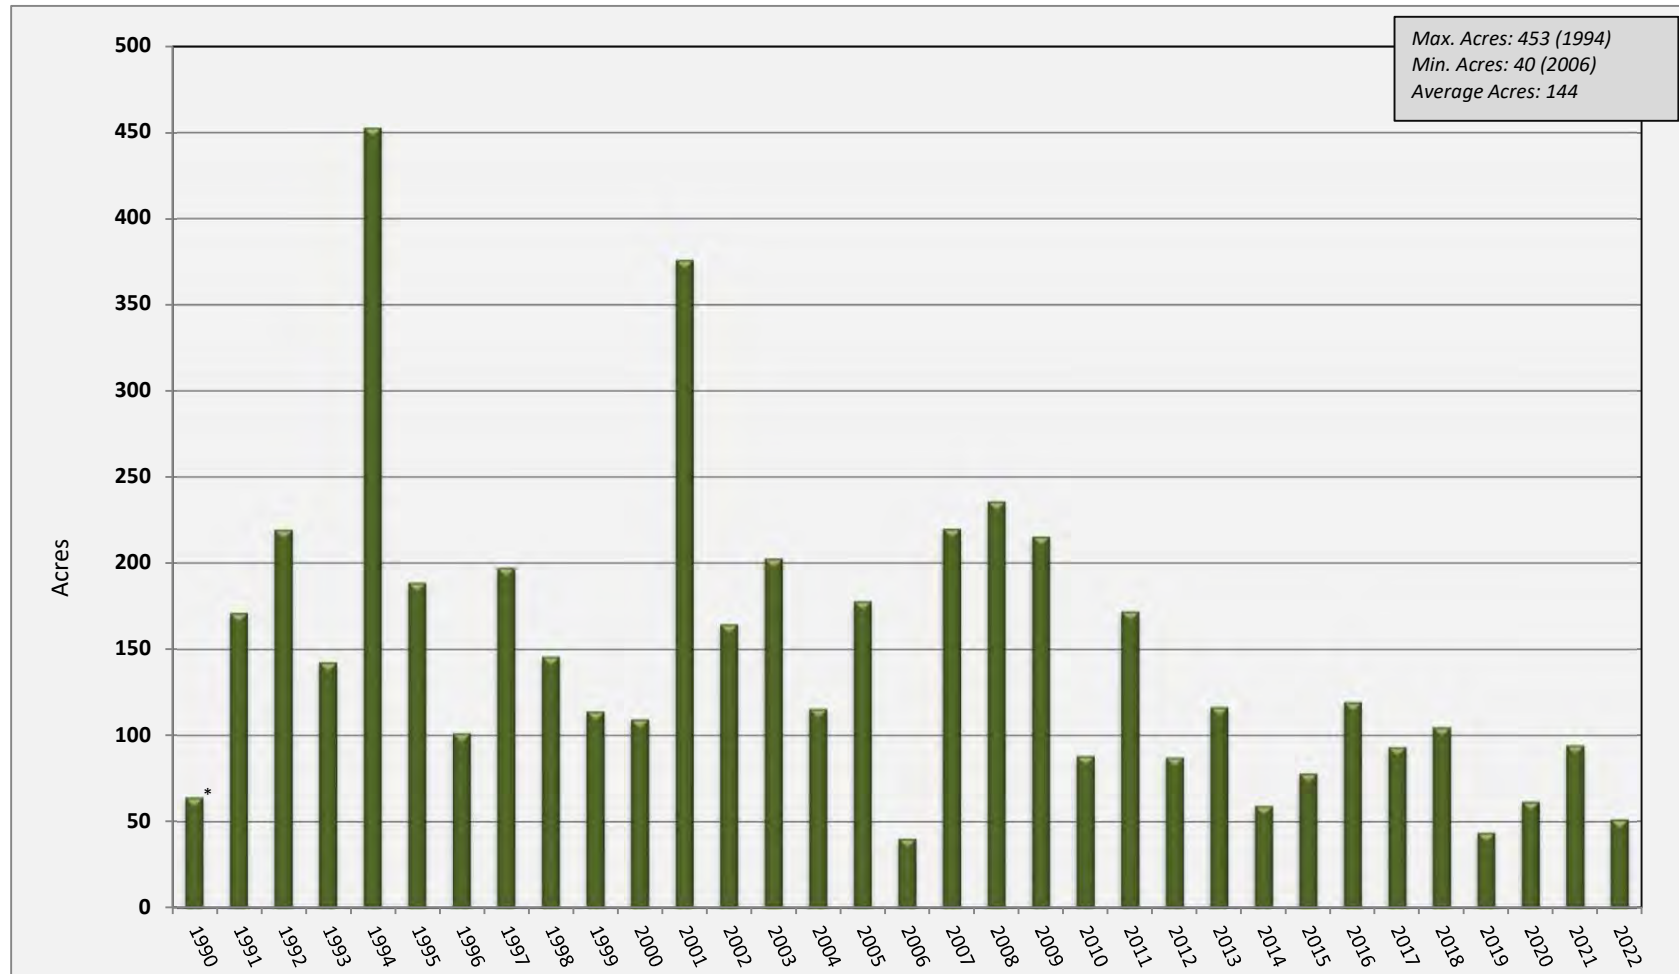

¹ WisDOT is in the process of identifying locations for future bank sites.

² Metrics do not include credits from sites that have been closed.

Mitigation Banking Instrument (MBI) History

- 1989 Pilot Bank Site - District 1 Patrick Marsh
- 1993, 1997, 2002 Umbrella MBI Agreement
- 2013 Start of Single Site MBI Agreements (5)

Total WisDOT Wetland Acres Loss Per Year from 1990 through 2022

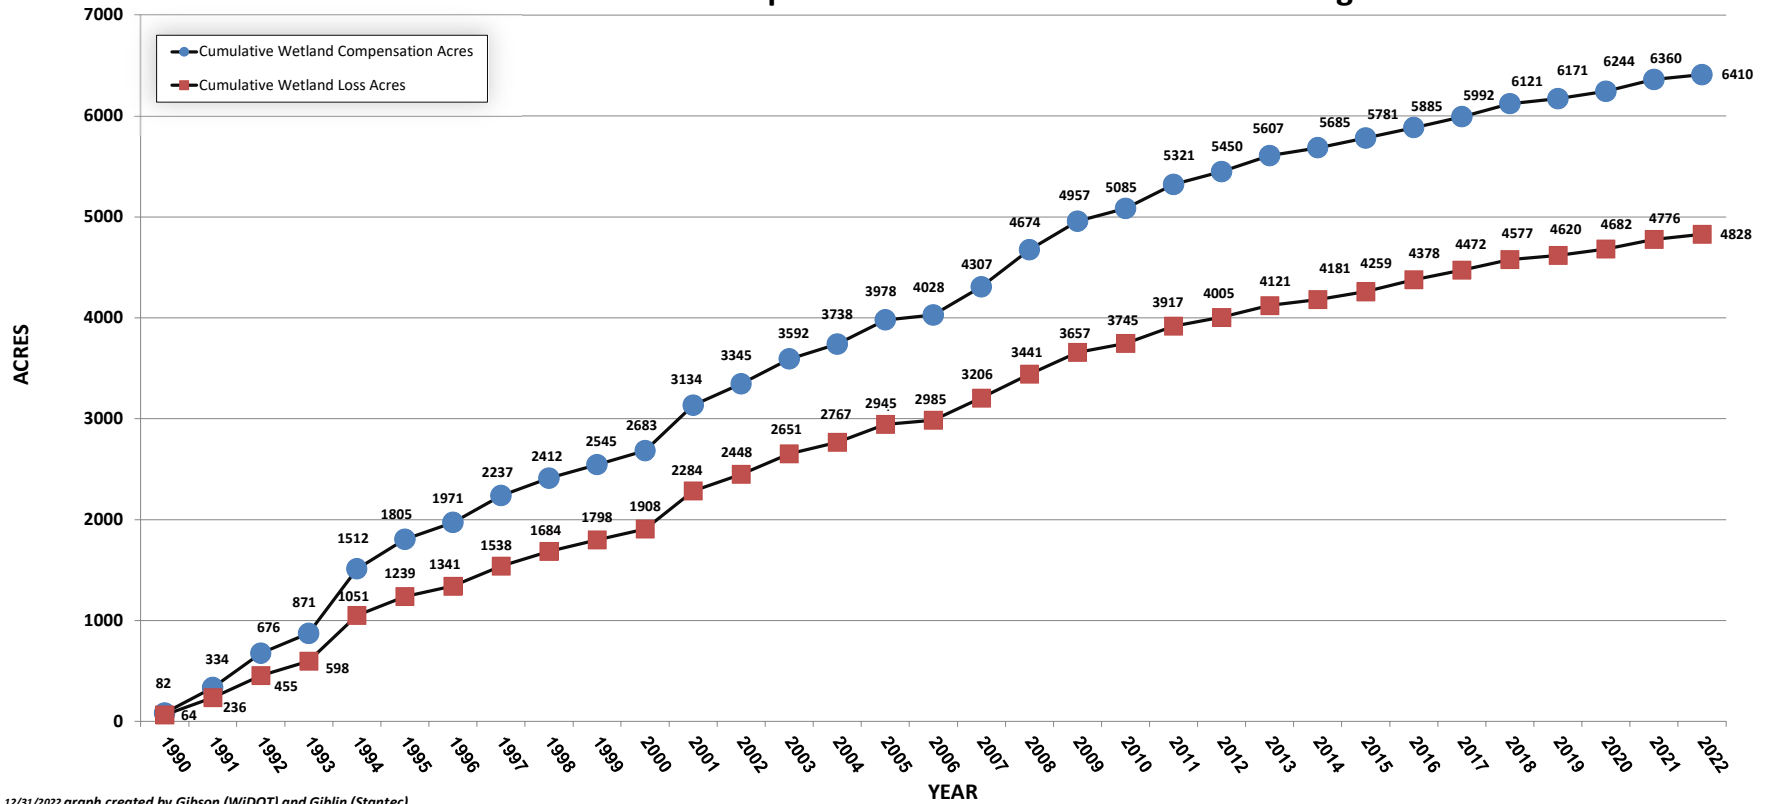

2022-12-31 Graph created by Gibson (WisDOT) and Giblin (Stantec)

** Only 4 of 8 districts submitted data*
DOT Districts reported (1990 - 2004)
DOT Regions reported (2005 - present)

The original Interagency Overview Council (IOC), which became the Mitigation Bank Review Team (MBRT) including U.S. Army Corps representation, agreed that accounting for wetland credit/debit would begin January 1, 1991.

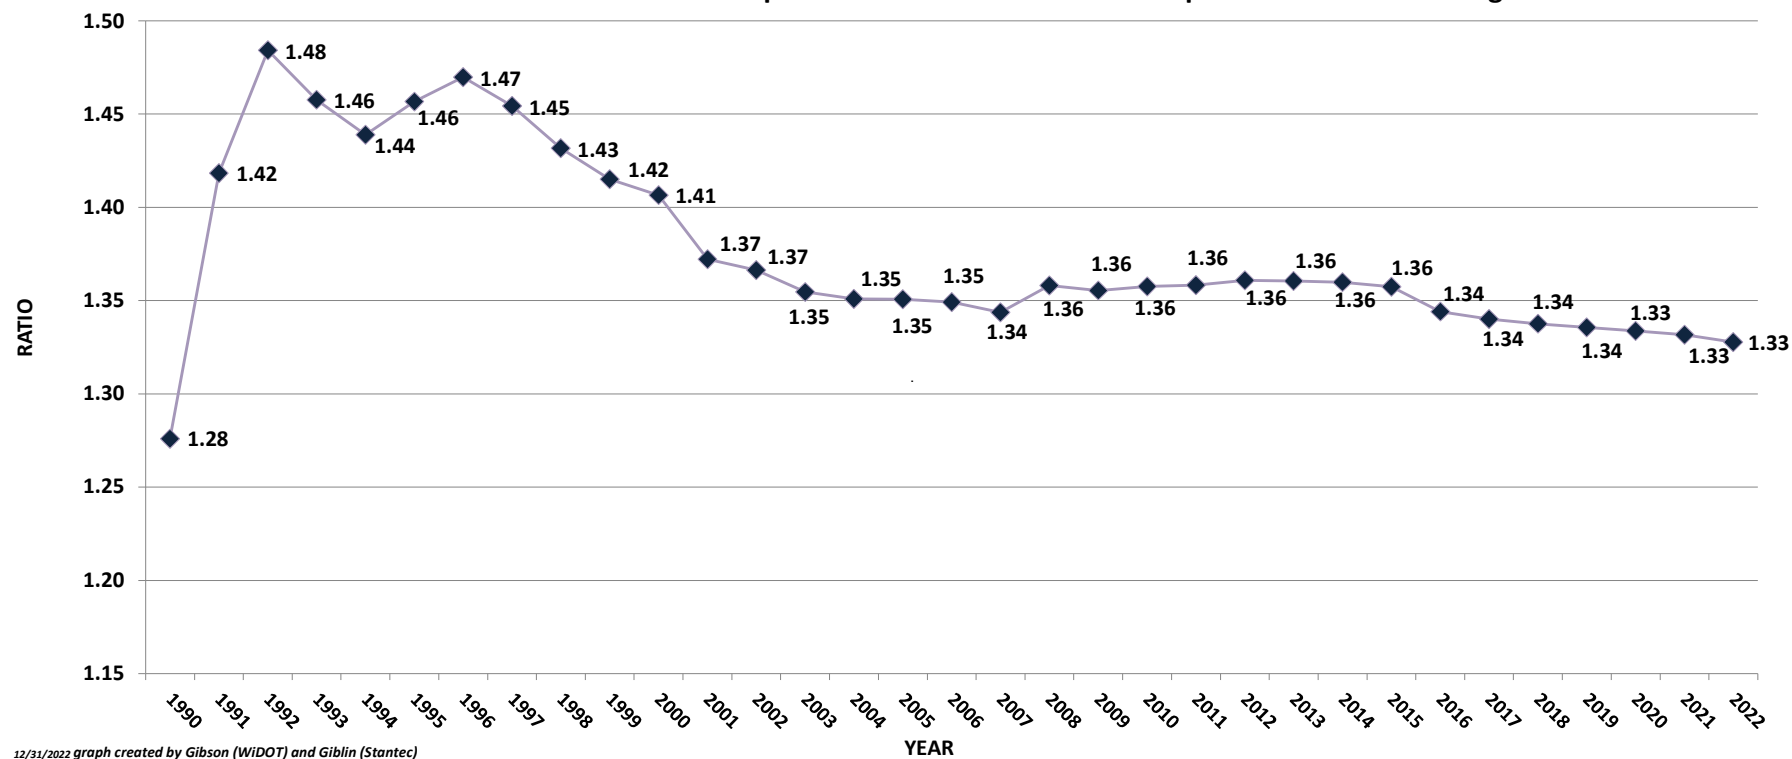

WisDOT Cumulative Wetland Compensation and Losses from 1990 through 2022

12/31/2022 graph created by Gibson (WisDOT) and Giblin (Stantec)

DOT 8 Districts reported (1990 - 2004)

Wetland Mitigation Banking Technical Guideline Interim Guidance

Fig. C1. Wisconsin DOT Wetland Bank Regions based on administrative boundaries. Actual floristic province and Lake Superior drainage area boundaries are approximated by dashed line. A discretionary zone is between the two boundaries.

** However: As interim guidance use the Natural Great Lakes and Mississippi River Watershed Basin Divide instead of the Administrative Boundary for compensation ratio increments.*

- Notes:
- 1) Refer to this graphic and the principles described in the Wisconsin Department of Transportation Wetland Mitigation Banking Technical Guideline (2002). Read operational criteria for the bank (geographic) and Appendix C (compensation ratios).
 - 2) Impacts and debits that cross the Natural Great Lakes Region Divide should be mitigated based on the Drainage Area (OUT) ratios in Table 3C taking into account wetland type and floristic province.
 - 3) Consider the WisDOT Bank bifurcated by the Great Lakes Watershed Divide and do not use credits crossing the divide without Bank Administrator approval.

Table 3C. Compensation ratio increments* by floristic province, drainage area, and wetland type. **

Wetland Type Lost	Bank Site Type	Within Floristic Province (In)		Outside Floristic Province (Out)

WisDOT's Original and Future Bank Service Areas

WisDOT's wetland bank program was setup with 5 bank service areas (BSAs), representing major drainage basins and floristic provinces, simplistically defined by county boundaries. WisDOT has begun adopting WDNR's BSAs for newly developed bank sites.

Original BSAs

Future BSAs

WisDOT Wetland Mitigation Bank Site Status 2022

Site Name:	Peshtigo Brook Phase 2	County:	Oconto
WisDOT Site ID:	1009-32-72	PLSS:	T30N, R18E, S3
Construction Completed:	2005	Office Region:	Northeast
Property Acreage:	281.84	Bank Service Area:	Northern Fox / Lake Michigan
Planned Credits:	160.92	Site Type:	Bank Site
Credits Pending Release:	0	USACE QAR:	2017-08-01

Released Wetland Acreage Credits

Starting Credits: 146.14

Released Wetland Type Credits

M = 50.86	DM = 0.00
SM = 19.18	RPF = 0.00
AB = 0.26	RPE = 0.00
WS = 31.94	M(D) = 0.00
SS = 43.90	Buffer = 0.00

Wetland Acreage Credit Status

Used Credits: 137.49

Available Credits: 8.65

Available Wetland Type Credits

M = 0.00	DM = 0.00
SM = 0.01	RPF = 0.00
AB = 0.00	RPE = 0.00
WS = 5.48	M(D) = 0.00
SS = 3.16	Buffer = 0.00

The USACE, in conjunction with the WisDOT, initiated a Quality Assessment Review (QAR) of all mitigation bank sites in 2017. The review of some sites has been completed, and any adjustments are reflected in this summary. The ongoing review process may result in additional changes to site acreages and credits. Credit Balances current as of 12/31/2022.

The USACE, in conjunction with the WisDOT, initiated a Quality Assessment Review (QAR) of all mitigation bank sites in 2017. The review of some sites has been completed, and any adjustments are reflected in this summary. The ongoing review process may result in additional changes to site acreages and credits. Credit Balances current as of 12/31/2022.

Southern Mississippi

A detailed topographic map of the Haney area in Washington. The map features a grid system with red and black lines. The Haney River is highlighted with a blue outline, flowing from the north towards the south. The map shows various ridges and valleys, including O'Neill Ridge, Pleasant Ridge, and Haney Valley. Key locations marked include Gays Mills, Quam, Bell Center, Maples, Petersburg, and Haney. The map also displays contour lines indicating elevation and several creeks and streams.
