

Enhancements and Bug Fixes of Note

- 1) Map enhancements including using different colors for the pins based on the HSIS status code (yellow for initiated, green for built, orange for closed).

- 2) New reach all and non-destructive evaluation activities added. These activities become available to select after an inspection type is selected. The reach all activity is to be used whenever a reach all is included under the special requirements on the NBI/Notes/Requirements tab. If a reach all is not used for an inspection, it should be deleted from the NBI/Notes/Requirements tab. Testing equipment must be included on the NBI/Notes/Requirements tab when the non-destructive evaluation activity is selected. More guidance on using these activities will be coming from the Structures Inspection and Repair Unit.

Activity Type

- Critical finding
- Deck evaluation
- Load posted verification (dt2122)
- Non- destructive evaluation
- Reach all
- Scour plan of action
- SIA review
- UW- profile (due Sep 2018)
- Vertical clearance measured

- 3) New inspection complete rules for ancillary structures, fracture critical inspections, and in-depth inspections.
- 4) Added end latitude and longitude for all structures.
- 5) New InspectionInsufficientDocumentationNotification subscription. This subscription will send an email when inspections are completed and missing cover photos or photos for elements with a quantity in CS 3 or CS4.
- 6) Various bug fixes.

Additional enhancements and bug fixes are listed in the release notes. Release notes for this and previous versions are found in HSIS under "Help".
