ADDENDUM NO. 01

6430-12-71

October 28, 2019

Special Provisions

47. Notice to Contractor – Contamination Beyond Construction Limits

The department completed testing for soil and ground water contamination for locations within this project where excavation is required. Testing indicated that petroleum-contaminated soil is present at the following sites:

1. Station 439+00 to 440+50 LT reference line on STH 76 as shown on the plans.

The contaminated soils at the above sites are expected to be beyond the excavation limits necessary to complete the work under this project. Control construction operations at these locations to ensure that they do not extend beyond the excavation limits indicated in the plans. If contaminated soils are encountered at these sites or elsewhere on the project during excavation, terminate excavation in the area and notify the engineer.

For further information regarding previous investigation and remediation activities at this site contact:
